

Loan Documentation & Handover

US-1001 Generate Loan Documentation Package

User Story

As the AI-Assisted Loan Origination System,

I want to generate a complete loan documentation package after the Sanctioning Authority approves the loan,

So that all required information is available for downstream document execution, loan booking, and disbursement processes.

Acceptance Criteria

Scenario 1 – Successful Document Package Generation

Given the loan application has been approved,

When the final lending decision is recorded,

Then the system shall generate a documentation package containing:

- Customer Details
 - KYC Information
 - Financial Analysis Summary
 - Collateral Assessment Report
 - Legal Due Diligence Report
 - Credit Risk Assessment
 - AI Credit Recommendation
 - AI Governance Report
 - Credit Officer Review
 - Sanctioning Authority Decision
 - Approved Loan Terms
 - Audit Trail
-

Scenario 2 – Mandatory Information Missing

Given the loan has been approved,

When any mandatory information is unavailable,

Then

- Document package generation shall stop.
 - Missing information shall be identified.
 - An exception shall be raised for manual resolution.
 - The issue shall be recorded in the audit log.
-

Scenario 3 – AI Governance Report Inclusion

Given AI-assisted credit assessment has been completed,

When the documentation package is generated,

Then the package shall include:

- AI Model Version
 - Confidence Score
 - Explainability Summary
 - Bias Evaluation Result
 - Hallucination Detection Result
 - Governance Validation Status
 - Human Review Outcome
-

Business Rules

- Documentation package generation is permitted only for approved applications.
 - All mandatory assessments must be completed before package generation.
 - The generated package shall be immutable after final approval.
 - Every generated package shall be linked to the Loan Application ID.
 - All document generation events shall be recorded in the audit trail.
-

US-1002 Publish Loan Package to Downstream Systems

User Story

As the AI-Assisted Loan Origination System,

I want to securely publish the approved loan package to downstream systems,

So that document execution, loan booking, and disbursement can proceed without duplicate data entry.

Acceptance Criteria

Scenario 1 – Successful Publication

Given the documentation package has been generated,

When publication is initiated,

Then the system shall publish:

- Customer Information
- Financial Assessment
- Collateral Assessment
- Legal Assessment
- Credit Risk Assessment
- AI Governance Report
- Credit Officer Recommendation
- Sanction Decision
- Audit Information

to the downstream Document Management System (DMS) or Core Banking System.

Scenario 2 – Publication Failure

Given publication is in progress,

When transmission fails,

Then

- The publication status shall be marked as Failed.
 - The reason for failure shall be recorded.
 - Retry shall be supported based on system configuration.
 - Operations users shall be notified.
-

Business Rules

- Only approved applications may be published.
- Data shall be encrypted during transmission.
- Only authorized downstream systems may receive the package.
- Every publication shall be fully auditable.
